## Participation in the ITER project

The Dolphin DXH510 cards were installed, configured and tested in FPSC computers to provide more reliable and faster communications between these machines.

The SDN API was integrated in MARTe to provide MARTe communications through this API, enabling MARTe to communicate with low latency.

The netCDF was installed and configured in all system and some features were developed:

- Data Archiving Client was integrated with EPICS and SDN API.
- Data Archiving Server was modified to send network statistics to EPICS.

In order to prepare beta version presentation some developments were performed like CSS panels and EPICS IOC.
